

Worksite biometric screenings

Get the data you need to help identify employees at risk, offer immediate guidance, set goals for long-term health initiatives and create impactful wellness strategies. When you measure key health factors, you can generate measurable results that go beyond the bottom line.

Biometric screening options available:

Lipid Profile
(finger stick)

Body Mass Index (BMI)

Blood Pressure

Waist Circumference

Blood Glucose

How it works

- 1 Employees schedule their own appointments online and sign a consent form.
- 2 The day of the screening employees are provided their results in a few minutes. A nurse reviews these with the employee and explains their numbers.*
- 3 Employers will receive an aggregate report of the biometric screening outcomes. This information can inspire your wellness program and focus it on areas that will have the greatest impact.

*If done in conjunction with an incentive program, and consent is provided, the individual data will be loaded into the WebMD Rewards Portal.

Cost

For ConnectiCare members, there is no out-of pocket cost. Non-covered employees can participate for the cost of the screening.

Make biometrics screenings part of your wellness initiative.
